

Fairfield/Vacaville Intermodal Station

The Fairfield/Vacaville Intermodal Station is a priority partnership project located in the heart of the San Francisco-Sacramento Mega-Region that will provide vital alternative transportation modes to Solano County residents as well as those commuting into the County. Located between the cities of Fairfield and Vacaville near Travis Air Force Base, the Station will provide over 200,000 residents convenient access to the Capitol Corridor passenger rail service and the entire Mega Region.

The Station Project will provide higher density housing and job centers with auto, bus, bicycle and pedestrian access to and from the Capitol Corridor passenger train service. It will also serve nearby Travis Air Force Base, home to the largest reserve wing in the Air Force providing active duty, retirees, reservists, and civilian employees from the Mega-Region easy alternative access to the Base.

Located in an economically distressed area and region with high unemployment and foreclosure rates, the Project will immediately create over 720 initial jobs during the two years of construction beginning in late 2014. The project supports longer-term economic activity by improving access to existing and planned job centers such as Travis Air Force Base and the mixed-use development, including higher density residential, commercial, and industrial envisioned by Fairfield’s Train Station Specific Plan.

***Transit oriented community development providing residents & commuters
With multiple, alternative transportation options***

Project Schedule		Project Funding		% of Total
Utility Relocation	Underway	Local/Regional/State	\$55,500,000	68%
ROW Acquisitions	Complete	Prior Federal	\$ 4,000,000	5%
Design Complete	May 2014	Pending TCIF Request	\$11,000,000	13.5%
NEPA Complete	Sept 2014	TIGER Request	\$11,000,000	13.5%
Construction Start	FY 2014-15	Total Cost/Funding	81,500,000	100%
Station Opens	Jan 2017			

Key Project Components Include:

- Intermodal Capital Corridor train station with building, solar array covered parking, shelters, and ticketing facilities serving Fairfield, Vacaville, Travis Air Force Base and beyond
- Park-and-ride accommodations and bicycle lockers.
- Bus passenger platform with well-lit and sheltered waiting area.
- Rail overpass to eliminate dangerous congestion and bottleneck traffic at at-grade track crossing. New underpass will provide safe passage for pedestrians, bicyclists, and people with disabilities from the bus, bicycle, parking and mixed use development areas, including schools and Travis Air Force Base.
- Rail extensions, upgrades, and provisions for a future 3rd main line track improving regional freight and passenger rail capacity.
- Provides a convenient and easily accessible alternative to the congested Interstate 80, a highly trafficked commercial corridor burdened with an average of 160,000 vehicles traveling per day

Train Station Specific Plan (TSSP) Land Use & Economic Development

Coordinated transportation and land-use planning have made the Station the catalyst for developing the transit-oriented Train Station Specific Plan (TSSP) that will govern most of the growth in Fairfield over the next 30 years, including:

- The development of 6,800 new homes with concentration of higher density mixed-use development – more than 3,000 within 10 minute walking distance of the Station - designed to reduce vehicle travel and encourage bicycle and pedestrian trips in a community rich with parks and open space
- Development of approximately 4.6 million sq. ft. industrial and 325,000 sq. ft. commercial space
